Retrospective Summary

Here's what went well:

- We were all able to get at least one feature/issue finished.
- We were able to get all the features on the TODO finished and added more issues to it.
- Clear when a feature/issue was completed or needed to be reviewed.
- Communication was good.

Here's what we'd like to improve:

- We didn't use the kanban board until the end but then started using it.
- Some members started their work near the end of the sprint which caused some crunch time
- Unclear when features/issues were going to get finished.

Here are changes we plan to implement in the next sprint:

- Use the kanban board to the best of its potential. So we will assign ourselves an issue when we start working on and finish it we will move it to the correct place.
- When we select one feature/issue to complete we will tell the group when we plan to finish it in order to keep us in check and to let the group know in case they are planning to do something that relies on that feature/issue being completed.
- If someone is falling behind we can check in with them to see if everything is alright or if they need some help with what they are doing. So we are able to complete our project.
